Subject: RE: PTPC BART addendum

Thanks.

I scanned it quickly, and it looks like it contains

1. good descriptions of the unit control devices.
2. the stack test data covers questions about sulfur emissions being to primary sludge being burned. As mentioned in the report this depends that a representative quantity of sludge was being burned during the test. I think this does answer my questions, and appreciate your thorough response made me personally curious about the actual contents of primary and secondary developing that information will have to be one of my future efforts.

I will be writing a draft order in a few days that will be proposed to the case of PTPC, since no new controls are proposed, the order will just conditions in your consolidated order from the Industrial Section in a any numerical limits or monitoring conditions. The purpose is to use fulfilled its BART requirements.

Subject: PTPC BART addendum

Bob-

As promised, here is the addendum to PTPC's BART Applicability Analysis. I would appreciate you filing this with the original Trinity report. Have any questions to your satisfaction. Please let me know if you need anything.

Thanks for your time on this-
